

Understanding the Pre-Approval Process: Applying for Pre-Approval

A Webinar for Site Coordinators and Students 2023-24

SRC Purpose

The **Science Review Committee (SRC)** is responsible for:

- Making sure certain projects receive pre-approval before experimentation can commence.
- Making sure California Ed. Code is followed when it comes to experimentation with vertebrate animals or using cell/tissue lines from vertebrates.
- Making sure **student experimenters and experimentees** are safe (follow CA Science Safety Handbook) and that Federal privacy laws are followed.

Projects Requiring Pre-Approval

Projects involving:

- **TISSUES / CELL LINES**
- **HUMAN SUBJECTS**
- **VERTEBRATE ANIMALS**
- **HAZARDOUS MATERIALS, ACTIVITIES, or DEVICES**
- **MICROBES**

The 4 Steps to Submitting a Proposal

1. Site Coordinator enrolls school online
2. Student logs into online registration (<https://app.lascifair.org/>) and enters his/her information.
 1. Student receives password by email
 2. Student logs back into online registration system and enters proposal

Obtaining Pre-Approval: Step 1

- The Site Coordinator must have completed the online enrollment process for the school

Please view our [Site Coordinator 101 PPT](#) for more information.

- Site Coordinators must have entered their information as well as their school's information into the online system.
- Receipt of payment is not required for students to apply for pre-approval.

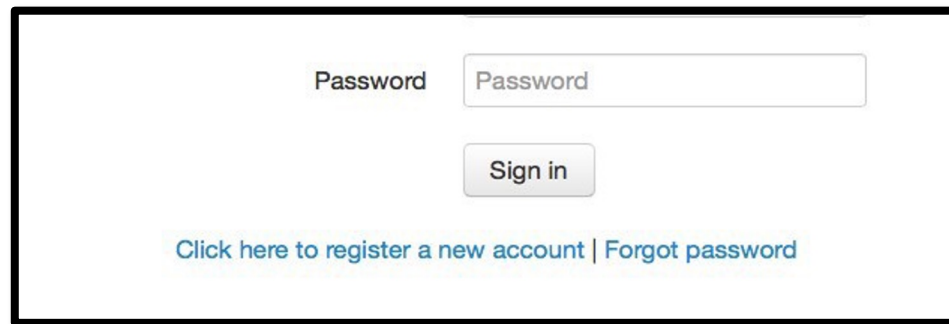

Important Notes:

- Our online system will only allow a maximum of 30 projects per school.
- If a school has **more than 30 projects** needing pre-approval, Site Coordinators should consider the quality and caliber of the student(s) project / topic / uniqueness of experiment.
- If a team is requesting pre-approval, **only 1 student** (*the Team Captain*) should submit the information. All members of a team must come from the **same school**.

Obtaining Pre-Approval: Step 2

- **Once a school is enrolled online**, students may submit their proposals via our online system.
- Students need to go to <https://app.lascifair.org/> and select **"Click here to register a new account."**

The image shows a screenshot of a login interface. It features a text input field labeled "Password" with the word "Password" inside. Below the input field is a "Sign in" button. At the bottom of the form, there is a link that reads "Click here to register a new account | Forgot password".

- On the next screen, students will select "I am a student" from the drop down menu and then click "Continue".

Obtaining Pre-Approval: Step 2, cont'd

- The student will now fill in the required information for each field.
- If a student's school does not appear on the drop down menu, the student must exit the site and let his or her Site Coordinator know that the school has not completed enrollment.
- The student needs to use an email address that is checked frequently and can receive emails from noreply@lascifair.org. When the student is done entering the Profile Information, the **Code of Conduct** boxes must be checked.

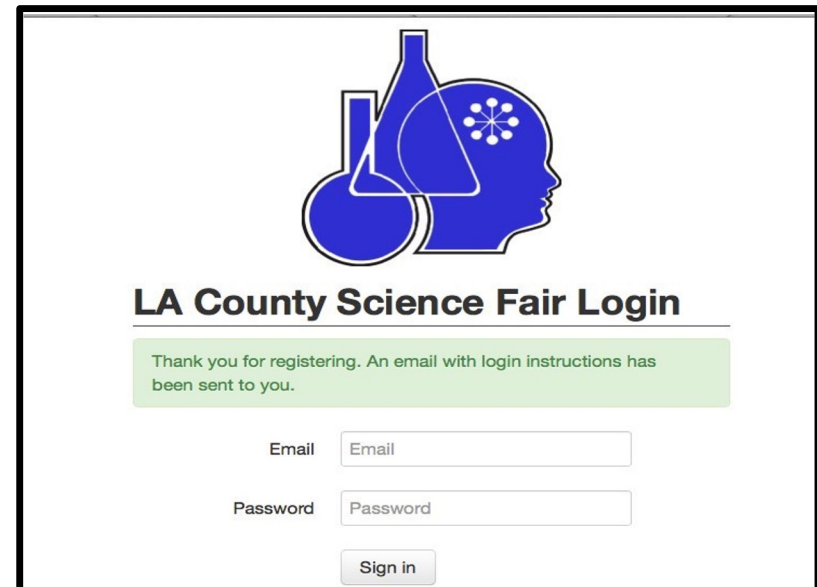

Student Code of Conduct

- I will compete honestly and with good sportsmanship.
- I will act with integrity and treat others with courtesy.
- I will respect Fair volunteers, staff, and judges and their decisions.

Continue

Obtaining Pre-Approval: Step 3

- When a student is **finished** entering his or her Profile Information and **clicks "Continue"**, the system will show that the information was received and that an email containing the password has been sent.
- When the student receives the **password**, he or she needs to **write it down somewhere safe**.

The image shows a screenshot of the LA County Science Fair Login page. At the top, there is a logo featuring a blue silhouette of a human head in profile, facing right. Inside the head, there are several blue icons: a round-bottom flask, a test tube, and a molecular structure. Below the logo, the text "LA County Science Fair Login" is displayed in a bold, black font. Underneath this, a green message box contains the text: "Thank you for registering. An email with login instructions has been sent to you." Below the message box, there are two input fields: "Email" and "Password". Each field has a corresponding label to its left. At the bottom of the form, there is a "Sign in" button.

Obtaining Pre-Approval: Step 4

- Once the password is received, students can log into the online registration system (app.lascifair.org) using their email address and password.
- On the next screen, students will indicate that they are submitting a proposal for Pre-Approval.

You will then see the project listed below.

[Request Project Pre-Approval](#)

Obtaining Pre-Approval: Step 4, cont'd

- Students will then select the type of project they are submitting (human subject, vertebrate animal, tissue/ cell line, microbes, hazardous materials/procedures).
- If a project falls into **more than 1** of the areas, then **additional forms** must be submitted.
- **If your project involves humans *in any way***, you need to complete the **Human Subjects Form** [at this link](#):
- In addition, **Senior Division** students need to complete the fillable **ISEF Human Consent form** found [here](#). All participant forms have to be ***brought to the fair***, with signatures.

Obtaining Pre-Approval: Step 4, cont'd

- Once on the correct form, the student will enter the information into the fields as prompted.

Before filling out this form, please read the [guidelines for tissue/ cell line research and safety precautions](#).

Title

Problem In the form of a question.

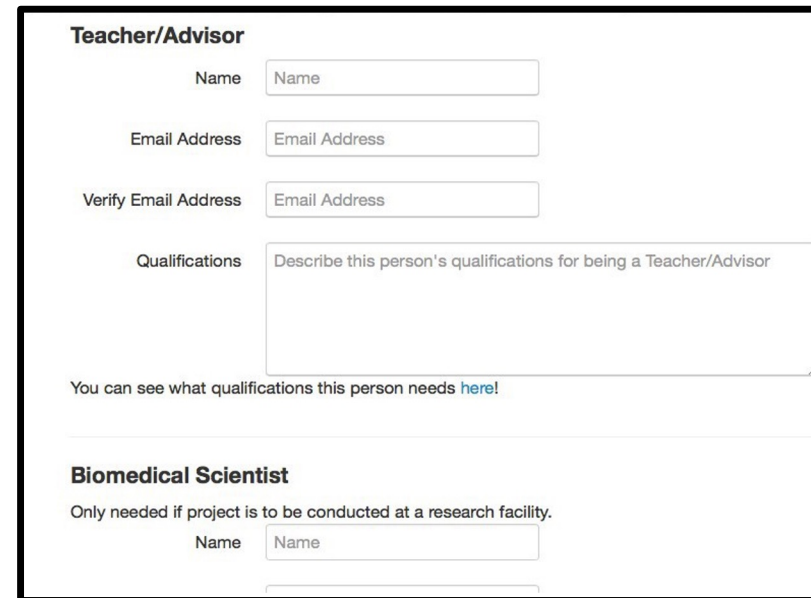

Objective(s) Your goal for the project - why is it important?

Hypothesis Example: "IF I do this... THEN this will happen..."

Number of Participating Students

Obtaining Pre-Approval: Step 4, cont'd

- At the **bottom of the form**, there are fields for the adult supervisor, biomedical scientist, animal care supervisor, etc.

The screenshot shows a web form with two main sections. The first section is titled 'Teacher/Advisor' and contains four input fields: 'Name', 'Email Address', 'Verify Email Address', and 'Qualifications'. The 'Qualifications' field is a larger text area with a placeholder text 'Describe this person's qualifications for being a Teacher/Advisor'. Below this section is a link: 'You can see what qualifications this person needs [here!](#)'. The second section is titled 'Biomedical Scientist' and includes a note: 'Only needed if project is to be conducted at a research facility.' followed by a 'Name' input field.

- Students **MUST** enter the **correct email** for each of the **individuals** as the system will send a email to all listed, asking that person to verify his/her role in the project. *The SRC will not receive the proposal **until ALL the verifications are complete.***

Obtaining Pre-Approval: Step 4, cont'd

- It is **strongly recommended** that Site Coordinators require their students to download and fill in the template(s) matching their project and get teacher approval before completing the same form online.
- **Fillable PDF templates are available on Padlet**; coming soon to our website.
 - [tissue/cell lines](#)
 - [human subjects](#)
 - [live vertebrate animals](#)
 - [hazardous materials](#) and/or
 - [microbes](#)

Obtaining Pre-Approval: Step 4, cont'd

- Once the proposal is submitted online, the student is done!
- Please allow the SRC time to review the proposal. We have a [Google Slide presentation](#) on our that explains what happens when the SRC reviews a project.

Important Reminders

All Projects

- Student **clearly explains** what he or she is going to do in the experiment.
- The student **clearly describes** all safety precautions and whether goggles, gloves, etc. will be worn during the experiment.
- The student makes it clear when he or she will have **adult supervision** during the experiment and what the adult will physically do.
- The **References** section includes 1 source that is not simply a website.
- References are properly [API formatted](#).

Important Reminders, cont'd

Human Subjects

- All risks (both physical and psychological) are assessed for projects involving human subjects.
- Allergies and other medical conditions such as diabetes are considered in projects involving human subjects and food, drink, gum, etc.
- The student discusses how **confidentiality** of human subjects will be maintained.

Important Reminders, cont'd

Vertebrates & Microbes

- A detailed description of the care of a vertebrate animal before, during, and after the experiment is present. Student states what will happen to the animal after the experiment ends.
- The student clearly states where microbes will be cultured (*they cannot be cultured at home*).
- The student describes how microbes / the Petri dish will be disposed of after the experiment.

Thank You!

- Thank you for taking the time to understand the general pre-approval process.
- You are strongly encouraged to view the webinar on the type of project you are considering to further understand what needs pre-approval.
- Our website has Frequently Asked Questions about projects requiring pre-approval as well.
- If you have any questions, please do not hesitate to contact the SRC Committee at <mailto:Pre-approval@lascifair.org>
